Scenario:
[Existing experience through a product or service]

	Entice How does someone become aware of this service?	Enter What do people experience as they begin the process?	Engage In the core moments in the process, what happens?	Exit What do people typically experience as the process finishes?	Extend What happens after the experience is over?
Experience steps What does the person (or people) at the center of this scenario typically experience in each step?	The user encounters a language barrier (e.g., a foreign research PDF or a street sign) and searches for a specialized multimodal translation solution.	The user opens the Streamlit web application and navigates to the relevant feature tab (Documents or Camera)	The user uploads their PDF or captures a photo; the Gemini 3 Flash model processes the data and generates the translation	The translation appears on the dashboard; the user reviews the text and confirms its accuracy	The user saves the file and uses the translated information for their thesis work or to reach their destination
Interactions What interactions do they have at each step along the way? - **People:** Who do they see or talk to? - **Places:** Where are they? - **Things:** What digital touchpoints or physical objects do they use?	**People:** Peer recommendations or academic supervisors **Places:** Online forums, LinkedIn, or GitHub project repositories **Things:** Web browser search results for "Gemini 3 Flash PDF Translator	**Places:** At their desk (student) or on the street with a mobile device (traveler) **Things:** Streamlit sidebar, language selection dropdown menus, and the file upload button	**People:** None (automated AI interaction) **Things:** API call to Google Gemini, progress bars, and the real-time processing status indicator.	**Places:** Digital dashboard **Things:** Side-by-side comparison view and the "Download Translated Result" button	**People:** Sharing the translated paper with colleagues or fellow travelers **Things:** Local file system, cloud storage (Google Drive), or printed travel guides
Goals & motivations At each step, what is a person's primary goal or motivation? ("Help me..." or "Help me avoid...")	Help me find a tool that can handle technical text and images without losing the original context	Help me quickly set up my translation without having to create an account or watch a long tutorial	Help me get an accurate translation of this complex technical content in less than 10 seconds	Help me verify that the tables, headers, and specific technical terms are correct	Help me keep this knowledge accessible for offline use so I don't have to translate it again
Positive moments What steps does a typical person find enjoyable, productive, fun, motivating, delightful, or exciting?	Finding a tool that explicitly mentions PDF and Vision support using high-speed AI models	The fast loading speed of the web interface and the simplicity of the "One-Click" setup	Seeing the AI successfully extract text from a "locked" or low-quality image/PDF	Finding that the translation maintained the academic tone and layout of the original document	Successfully citing the foreign-language paper in their own research thanks to the AI's help
Negative moments What steps does a typical person find frustrating, confusing, angering, costly, or time-consuming?	Seeing too many basic text-only translators that don't meet complex needs	Feeling briefly overwhelmed if there are too many language options to scroll through.	Encountering a "429 Quota Exceeded" error if the system is at maximum capacity	Realizing a specific formatting element (like a complex chart) didn't translate perfectly	Difficulty managing multiple downloaded files if they aren't automatically named well
Areas of opportunity How might we make each step better? What ideas do we have? What have others suggested?	Increase visibility in academic circles and travel blogs through targeted SEO	Add an "Auto-detect language" feature to reduce the steps needed to start	Implement the Multi-model failover logic to automatically switch to Gemini 2.5 if the primary model fails	Provide a "Feedback" button for users to report and correct minor translation errors	Add a "History" feature so users can access their previous translations from any device
